POOJA KIRAN

Security Engineer | Application Security | AI & Agent Security | Cloud IAM

Tempe, AZ | +1 480-776-7745 | poojakiranbhardwaj@gmail.com | LinkedIn | GitHub | Portfolio

Professional Summary

Security engineer with an M.S. in Information Technology who identifies security flaws, fixes them, and tests the results. Reviewed **14 security repositories**, documented **1 P0 and 5 P1 findings** in a dated source/CI audit, and tested an **MCP security gateway** with **782 passing tests** and **81.93% statement coverage** in a cited Python 3.12 CI run.

Professional & Applied Experience

Independent AI Security Researcher & Engineer Aug 2024 – Present

Self-Directed Research | Tempe, AZ

- Built the MCP Agent Security Gateway with Python, FastAPI, and MCP/JSON-RPC to guard against unauthorized AI-agent actions, prompt injection, and sensitive-data exposure; implemented 69 detection signatures, default-deny authorization, and 9 Elastic Security rules, supported by 782 passing tests and 81.93% statement coverage in a documented CI run.
- Worked directly with an early-stage security startup founder to integrate privacy-preserving identity telemetry into the MCP gateway; delivered authenticated client paths for 3 identities and secured independent verification of event attribution, helping clarify customer-onboarding requirements and deployment limitations.
- Developed open-source security tools to identify excessive AWS IAM permissions, assess AI model supply-chain risks, and investigate security events; implemented 25 IAM analysis rules and validated 244 identity-security tests and 296 attack-detection tests, delivering reproducible findings and documented controls for developers and security teams.

Business & Compliance Lead Aug 2025 – Dec 2025

Honeywell Aerospace × Arizona State University | Technology Innovation Lab Externship | Tempe, AZ

- Led project coordination for a four-member team developing AEROSEC, an aviation cybersecurity concept; organized responsibilities across remote teammates, tracked progress, and communicated requirements in weekly mentor meetings to keep technical research, business planning, and compliance work aligned.
- Interviewed 4 of 12 industry participants and consolidated findings with teammates; translated aviation cybersecurity concerns into requirements for API authorization, encryption, audit logging, and vendor-risk management.
- Led business and financial planning, comparing 4 commercial security solutions and developing a $120,000 first-year budget with a 12-month operating plan; presented technical risks, market positioning, and financial assumptions to industry evaluators assessing the proposed business model.

Graduate Teaching Assistant | IT Grader Jan 2025 – Oct 2025

Arizona State University | Ira A. Fulton Schools of Engineering | Tempe, AZ

- Supported approximately 85 undergraduate students per semester through web application development, reviewing code, project milestones, and final submissions; provided actionable feedback to help students identify defects, improve implementation quality, and meet project requirements.
- Evaluated 52 graduate cybersecurity assignments covering risk assessment, security compliance, infrastructure security, and configuration management; identified gaps in technical reasoning and documentation and provided feedback aligned with course requirements and established security frameworks.
- Coordinated grading and student communication with faculty across undergraduate and graduate courses; applied consistent evaluation criteria, addressed technical questions, and escalated exceptions to support timely feedback and fair assessment.

Selected Security Engineering Projects

MCP Agent Security Gateway | Python, FastAPI, MCP/JSON-RPC, Elastic SIEM Oct 2025 – Oct 2026

- **Built** a default-deny **MCP/JSON-RPC** gateway with capability checks, **anti-SSRF** rules, 69 named prompt-injection signatures, hash-chained audit records, and nine **Elastic Security** detection rules.
- **Verified** agent-to-tool enforcement and failure paths using **Python 3.12 CI**; recorded **782 passing tests** and **81.93% statement coverage** in the cited run.

AWS Agent Identity Guard | Python, AWS IAM, SARIF 2.1.0 Apr 2025 – Oct 2026

- **Developed** 25 **AWS IAM** static-analysis rules for broad grants, **iam:PassRole**, **sts:AssumeRole**, and trust-policy risks; exported findings in **SARIF 2.1.0** for CI review.
- **Validated** the rule suite in cited CI: **244 tests passed** and three credential-dependent tests were skipped; did not claim live AWS effective-permission results.

HF Model Provenance Scanner | Python, SafeTensors, GGUF, ONNX, Keras Nov 2024 – Oct 2026

- **Built** non-executing checks for unsafe serialization, embedded code, **model provenance**, and dependencies across **SafeTensors**, **GGUF**, **ONNX**, and **Keras** inputs.
- **Detected** suspicious content in **33/33 curated adversarial fixtures**; confirmed **260 passing CI tests** and **75.67% statement coverage** without describing fixtures as real-world detection rates.

Attack Detection Engine / Aegis HealthSec | Python, FastAPI, PostgreSQL, ARM/CAN Aug – Oct 2026

- **Extended MITRE ATT&CK v19** detection with offline **CAN**, **C/C++ firmware**, and **ARM ELF32** analysis using synthetic lab inputs and reproducible tests.
- **Integrated** clinical-access detection and a **FHIR R4 AuditEvent** parser with event normalization, deterministic correlation, and **PostgreSQL** incident persistence on unmerged development branches.
- **Tested** an authenticated **FastAPI** investigation workflow with analyst actions and audit history; Milestone E reported **296 local tests passing** with real PostgreSQL, while hosted CI remained blocked.

Technical Skills

Security reviews and risk: Security design review, **threat modeling**, risk analysis, risk assessment, **API authorization**, web-services security, software testing, CI security checks

Cloud, network, operating systems: AWS IAM, DNS, HTTP, TLS, Zeek/Suricata-style telemetry, Linux /proc TCP, **HMAC-SHA256**, **Ed25519**

Engineering and leadership: Python, **C++**, **FastAPI**, **Docker**, **pytest**, **GitHub Actions**, **CodeQL**, SARIF, **Elastic SIEM**, remote peer coordination, compliance research, budgeting

Video content protection (concepts): DRM license flows, encrypted HLS/DASH, CloudFront signed URLs, AWS MediaPackage/SPEKE

Education

Arizona State University May 2026
M.S., Information Technology (Security) | GPA: **3.87/4.00**

M. S. Ramaiah University of Applied Sciences Aug 2023
B.Tech., Computer Science & Engineering

Certifications & Training

AWS Academy Graduate - Cloud Architecting Apr 2025

AWS Academy Graduate - Cloud Security Foundations Nov 2025
